Answers to your challenges

Meyn Food Processing Technologies takes its slogan (above) seriously, and decided to show visitors in live demonstrations which solutions it offers for the challenges of its customers. Meyn has built a real slaughter line as part of the stand, and demonstrates it every half hour. "Customers want to see and feel the fillets, the only way to achieve that is by giving this demonstration," says Judith Marques dos Reis from Meyn. The slaughter line includes the renewed Rapid Plus breast deboner, that can harvest all fillet and tender products automatically at the highest capacity, and packing solutions from Ishida, partner of Meyn.

Nabel enters Europe through Avitec

Nabel, Japan's market leader in egg packaging technology, has entered the European market for the first time, through an agreement with egg processing systems company Avitec of Italy. On the Avitec stand at the show, Fabio Bortolami of Avitec and Kensuke Kishikoji of Nabel presented the Japanese manufacturer's FFP 4100 Farm Packer as a reliable and durable machine constructed of stainless steel that has a capacity of 40,000 eggs per hour. "Avitec has become Nabel's agent in Europe," Mr. Bortolami announced. "We have worked in the egg business for 55 years and we know the customers. Nabel has a full product range including grading machines for up to 120,000 eggs per hour."

Heering B.V. delivers trailer at VIV Europe

Patrick Heering handed over the keys to one of Heering's new trailers on their stand yesterday. This delivery was the last in a series of three trailers for the family business from Belgium, that consists of four hatcheries; Belgabroed, Vervaeke-Belavi, Kuikenbroederij van Hulst and Incubel. Steven Vervaeke mentioned that they chose Heering trailers for day old chick transport because they have a focus on sustainability and quality. The trailers are equipped with the ecoPower technology, which reduces fuel consumption and optimises the conditions for the chicks. More new features of the trailer are a new type of air filter, that enhances the air quality in the carrier, and Heering Link, a fleet management system that lets the customer monitor and manage the fleet's productivity as they can real-time track locations, monitor temperatures and more.
